## Methodology

# Environmental Impact Assessment

<b>Functional unit</b>	<p>The functional unit is a quantified performance of a product system for use as a reference unit. One of the primary purposes of a functional unit is to provide a reference to which the input and output data are normalized (in a mathematical sense).</p> <p>The functional unit of this analysis is "500 page(s) of A4 paper for writing".</p>
<b>Impact Indicator</b>	<p>The impact is measured through the "IPCC 2013 GWP 100a" method.</p>
<b>Electricity impact calculation method</b>	<p>Following guidelines from the GHG Protocol, the impact of electricity is calculated using the location-based approach. This means that the emission factors used represent the average annual carbon intensity of the power grid in the country the processes take place in.</p>
<b>Hypothesis</b>	<p>Manufacturing Processes and associated loss percentages are assumed based on materials in the product.</p> <p>The electricity is based on the average in the country of manufacturing.</p> <p>Transportation is based on the common routes between the country of manufacturing and the country of sale.</p> <p>No replacements during the lifetime, therefore there are no emissions corresponding to the usage phase.</p> <p>The End of Life is based on the average waste management process of the materials in the product.</p>

# Environmental Impact Assessment

## System Boundaries

The scope of this research includes the complete lifecycle of a piece of paper from raw material extraction to disposal options for each material, which is the cradle-to-grave perspective.

## Exclusions

The impact of secondary packaging impact and writing utensils are excluded from this assessment.

# 02

## Results

2.201.463 (sold in WI)

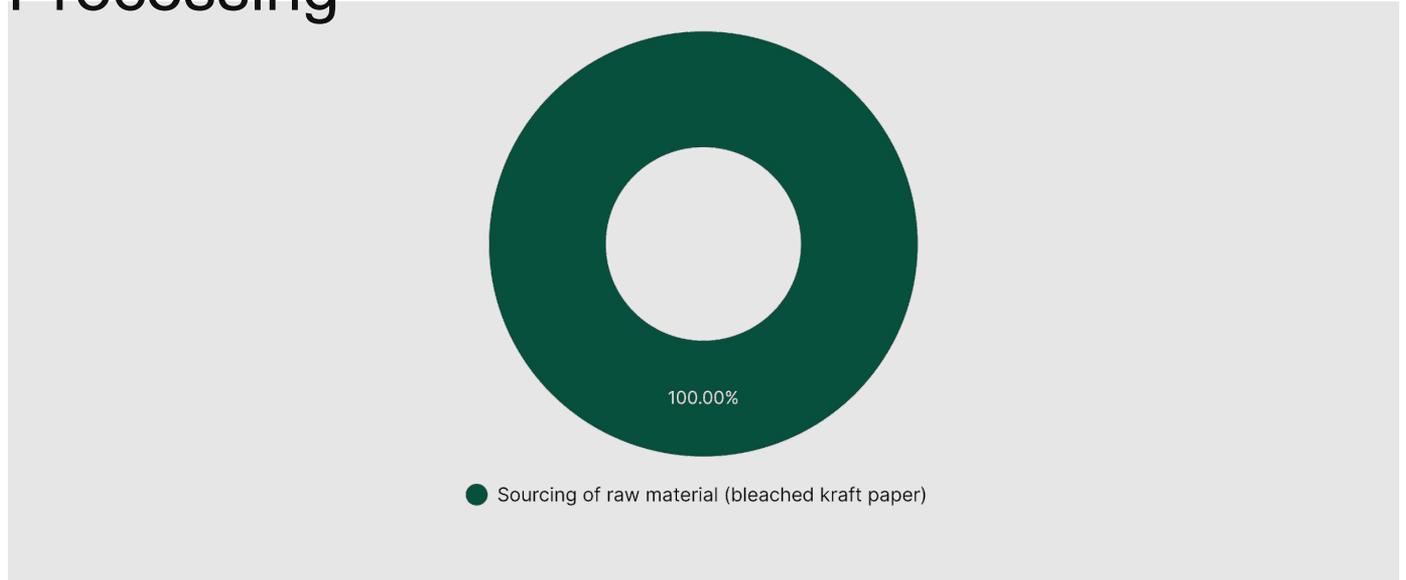

# Climate Change

Step	Impact (kg CO <sub>2</sub> eq)	Percentage (%)
Raw Material Extraction and Processing	2.15	48.80 %
End-of-Life Treatment	1.66	37.67 %
Manufacturing	0.46	10.56 %
Transportation and Distribution	0.13	2.96 %
<b>TOTAL</b>	<b>4.4</b>	<b>100.00 %</b>

2.201.463 (sold in WI)

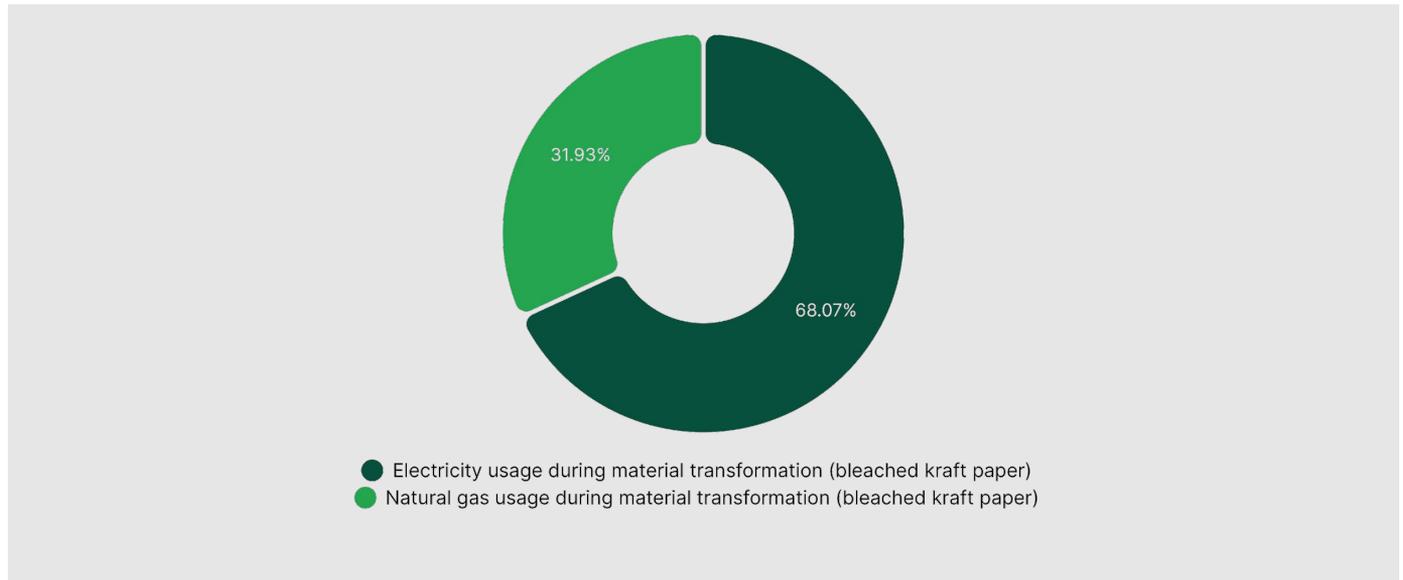

# Climate Change - Raw Material Extraction and Processing

Activity	Emission Factor Num	Quantity	Impact (kg CO <sub>2</sub> eq)	Percentage (%)
Sourcing of raw material (bleached kraft paper)	1	4.31	2.15	100.00 %
TOTAL			2.15	100.00 %

2.201.463 (sold in WI)

# Climate Change - Manufacturing

Activity	Emission Factor Num	Quantity	Impact (g CO <sub>2</sub> eq)	Percentage (%)
Electricity usage during material transformation (bleached kraft paper)	2	1.53	316.3	68.07 %
Natural gas usage during material transformation (bleached kraft paper)	3	0.82	148.34	31.93 %

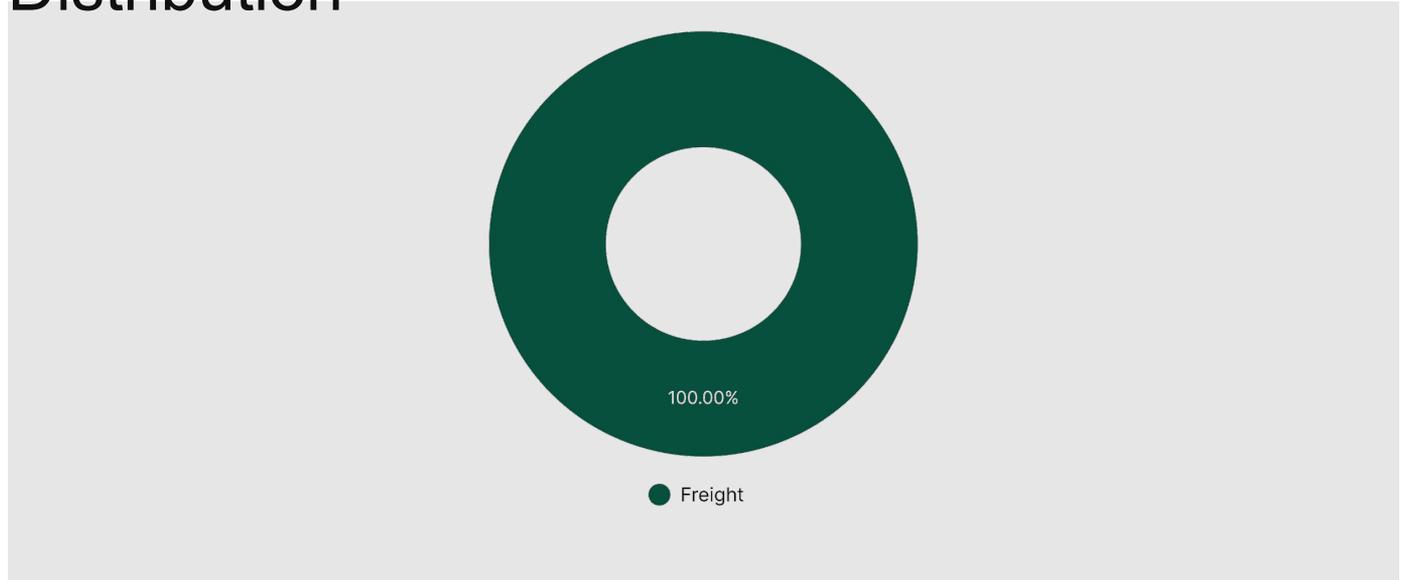

--	--	--	--	--

--	--	--	--	--

TOTAL			464.64	100.00 %
-------	--	--	--------	----------

2.201.463 (sold in WI)

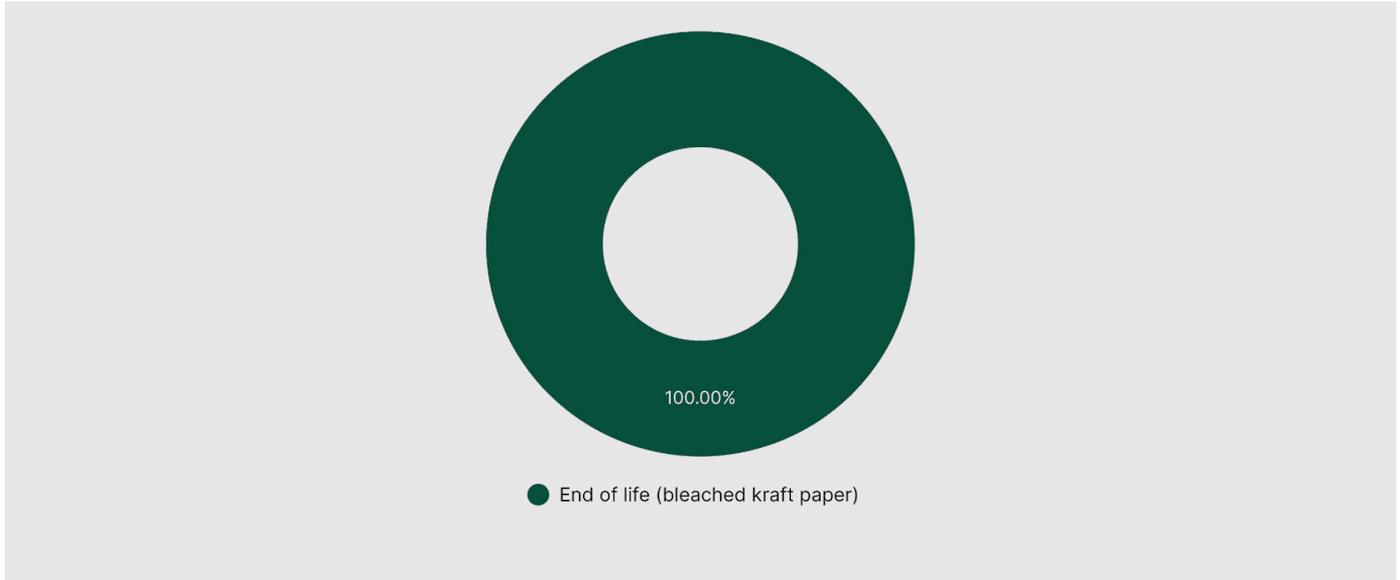

# Climate Change - Transportation and Distribution

Activity	Emission Factor Num	Quantity	Impact (g CO <sub>2</sub> eq)	Percentage (%)
Freight	4	2.88	130.46	100.00 %
TOTAL			130.46	100.00 %

2.201.463 (sold in WI)

# Climate Change - End-of-Life Treatment

Activity	Emission Factor Num	Quantity	Impact (kg CO <sub>2</sub> eq)	Percentage (%)
End of life (bleached kraft paper)	5	2.88	1.66	100.00 %
TOTAL			1.66	100.00 %
