

USB Bottom Leads explained

We are all moving to IP phones. These can be conventional looking desk phones with all the usual functionality and looks so users are comfortable with migration away from traditional phone systems to an IP desk phone. At the same time, IP softphones are becoming more mainstream. Softphones such as Skype for Business and Cisco Jabber work with software on PC/mobile devices using the internet to dial out straight from the PC without the need for a physical phone.

Many in the industry believe that over time desk phones will be phased out as all the functions found on them should be available through software and a click of a mouse on the PC. One thing you will need is **a headset**, the most likely connection would be USB although some computers, including Apple, accept a 3.5mm jack connection as well as USB connection.

Bottom Leads connect your headset to your telephone.

(Available with GN QD upon request.)

Plantronics Compatible QD's: PLX = JPL's Quick Disconnect Technology compatible with Plantronics™ QD's.
