

FACE COVERING DATASHEET

The  Face Covering is a general-purpose face covering designed for use by the general public.

It minimizes the projection of user's respiratory droplets, saliva, sputum or respiratory secretions when talking, coughing or sneezing.

It also limits penetration in the user's area of nose and mouth of the respiratory droplets from external origin. In addition, it also prevents the user's area from any contact with hands.

RotoMedicals FACE COVERING is ideal for complying with government guidelines to wear face coverings in public areas or on public transport.

RotoMedicals FACE COVERING meets all requirements of BSI recommended standard **AFNOR S76-001** that include design, performance, test methods, packaging, marking and information for use.

Results of BSI testing show the product performs significantly better than standard requirements.

	Breathing Resistance			NaCl Penetration
	Inhale @ 30l/min	Inhale @ 95l/min	Exhale @ 160l/min	
AFNOR	<2.4	N/A	<3	>70%
CEN	N/A	<2.4	N/A	>70%
