Methodology

Environmental Impact Assessment

<p>Functional unit</p>	<p>The functional unit is a quantified performance of a product system for use as a reference unit. One of the primary purposes of a functional unit is to provide a reference to which the input and output data are normalized (in a mathematical sense). The functional unit of this analysis is "16 set(s) of adhesive notes for the purpose of writing".</p>
<p>Impact Indicator</p>	<p>The impact is measured through the "IPCC 2013 GWP 100a" method.</p>
<p>Electricity impact calculation method</p>	<p>Following guidelines from the GHG Protocol, the impact of electricity is calculated using the location-based approach. This means that the emission factors used represent the average annual carbon intensity of the power grid in the country the processes take place in.</p>
<p>Hypothesis</p>	<p>The Product's material composition is supplemented by secondary information, if necessary, as shown in the list below.</p> <ul style="list-style-type: none"> - paper: paper 99% - binding: adhesive 1% <p>Manufacturing Processes and associated loss percentages are assumed based on materials in the product.</p> <p>The electricity is based on the average in the country of manufacturing.</p> <p>Transportation is based on the common routes between the country of manufacturing and the country of sale.</p> <p>No replacements during the lifetime, therefore there are no emissions corresponding to the usage phase.</p> <p>The End of Life is based on the average waste management process of the materials in the product.</p>

Environmental Impact Assessment

System Boundaries

The scope of this research includes the complete lifecycle of a stack of sticky notes from raw material extraction to disposal options for each material, which is the cradle-to-grave perspective.

Exclusions

The impact of secondary packaging and writing utensils are excluded from this assessment.

Results

6814786 (sold in FR)

Climate Change

Step	Impact (kg CO ₂ eq)	Percentage (%)
Raw Material Extraction and Processing	1.32	61.65 %
End-of-Life Treatment	0.45	20.90 %
Manufacturing	0.22	10.46 %
Transportation and Distribution	0.15	6.99 %
TOTAL	2.13	100.00 %

6814786 (sold in FR)

Climate Change - Raw Material Extraction and Processing

● Sourcing of raw material (adhesive) ● Sourcing of raw material (coloured kraft paper)

Activity	Emission Factor Num	Quantity	Impact (kg CO ₂ eq)	Percentage (%)
Sourcing of raw material (coloured kraft paper)	2	1.13	1.27	96.52 %
Sourcing of raw material (adhesive)	1	8.39 · 10 ⁻³	0.05	3.48 %

--	--	--	--	--

--	--	--	--	--

TOTAL			1.32	100.00 %
-------	--	--	------	----------

6814786 (sold in FR)

Climate Change - Manufacturing

Activity	Emission Factor Num	Quantity	Impact (g CO ₂ eq)	Percentage (%)
Electricity usage during material transformation (coloured kraft paper)	4	0.4	177.21	79.44 %
Natural gas usage during material transformation (coloured kraft paper)	3	0.22	38.99	17.48 %
Electricity usage during material transformation (adhesive)	4	0.02	6.89	3.09 %
TOTAL			223.09	100.00 %

6814786 (sold in FR)

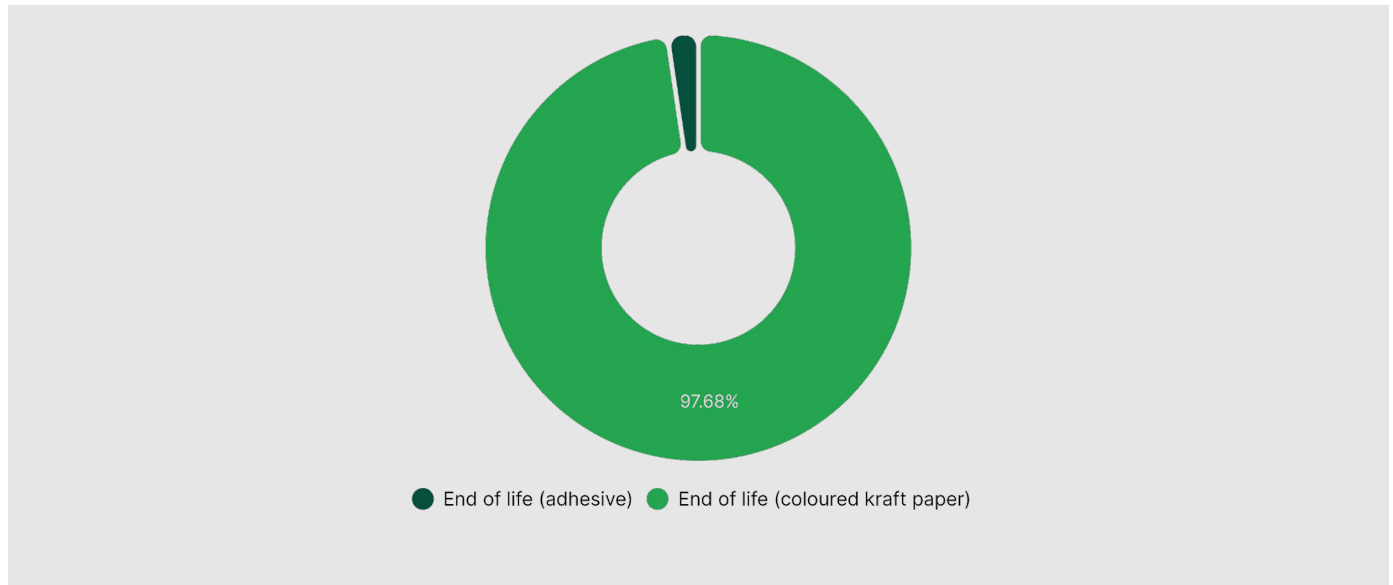

Climate Change - Transportation and Distribution

Activity	Emission Factor Num	Quantity	Impact (g CO ₂ eq)	Percentage (%)
Freight	5	0.76	149.12	100.00 %
TOTAL			149.12	100.00 %

6814786 (sold in FR)

Climate Change - End-of-Life Treatment

Activity	Emission Factor Num	Quantity	Impact (g CO ₂ eq)	Percentage (%)
End of life (coloured kraft paper)	6	0.76	435.66	97.68 %
End of life (adhesive)	7	7.63 · 10 ⁻³	10.33	2.32 %
TOTAL			445.99	100.00 %
