01

Methodology

Environmental Impact Assessment

Functional unit	<p>The functional unit is a quantified performance of a product system for use as a reference unit. One of the primary purposes of a functional unit is to provide a reference to which the input and output data are normalized (in a mathematical sense).</p> <p>The functional unit of this analysis is "1 set(s) of bound pages of paper for the purpose of writing".</p>
Impact Indicator	<p>The impact is measured through the "IPCC 2013 GWP 100a" method.</p>
Electricity impact calculation method	<p>Following guidelines from the GHG Protocol, the impact of electricity is calculated using the location-based approach. This means that the emission factors used represent the average annual carbon intensity of the power grid in the country the processes take place in.</p>
Hypothesis	<p>The Product's material composition is supplemented, if necessary, by secondary information as shown in the list below.</p> <ul style="list-style-type: none"> - pages: Paper 84% - cover: Cardboard 12% - binding: Metal 4% <p>Manufacturing Processes and associated loss percentages are assumed based on materials in the product.</p> <p>The electricity is based on the average in the country of manufacturing.</p> <p>Transportation is based on the common routes between the country of manufacturing and the country of sale.</p> <p>No replacements during the lifetime, therefore there are no emissions corresponding to the usage phase of the clipboard.</p> <p>The End of Life is based on the average waste management process of the materials in the product.</p>

Environmental Impact Assessment

System Boundaries

The scope of this research includes the complete lifecycle of a notebook from raw material extraction to disposal options for each material, which is the cradle-to-grave perspective.

Exclusions

The impact of secondary packaging and writing utensils are excluded from this assessment.

02

Results

5971292 (sold in FR)

Climate Change

Step	Impact (kg CO ₂ eq)	Percentage (%)
Raw Material Extraction and Processing	0.65	54.96 %
End-of-Life Treatment	0.4	33.81 %
Manufacturing	0.1	8.02 %
Transportation and Distribution	0.04	3.21 %
TOTAL	1.19	100.00 %

5971292 (sold in FR)

Climate Change - Raw Material Extraction and Processing

● Sourcing of raw material (bleached kraft paper) ● Sourcing of raw material (polypropylene)

Activity	Emission Factor Num	Quantity	Impact (g CO ₂ eq)	Percentage (%)
Sourcing of raw material (bleached kraft paper)	3	0.92	456.97	70.11 %
Sourcing of raw material (polypropylene)	2	0.04	114.04	17.50 %
Sourcing of raw material (steel)	1	0.04	80.8	12.40 %
TOTAL			651.8	100.00 %

5971292 (sold in FR)

Climate Change - Manufacturing

Activity	Emission Factor Num	Quantity	Impact (g CO ₂ eq)	Percentage (%)
Natural gas usage during material transformation (bleached kraft paper)	5	0.17	31.57	33.19 %
Electricity usage during material transformation (bleached kraft paper)	4	0.32	30.3	31.85 %
Electricity usage during material transformation (steel)	4	0.29	26.79	28.16 %
Electricity usage during material transformation (polypropylene)	4	0.07	6.48	6.81 %
TOTAL			95.13	100.00 %

5971292 (sold in FR)

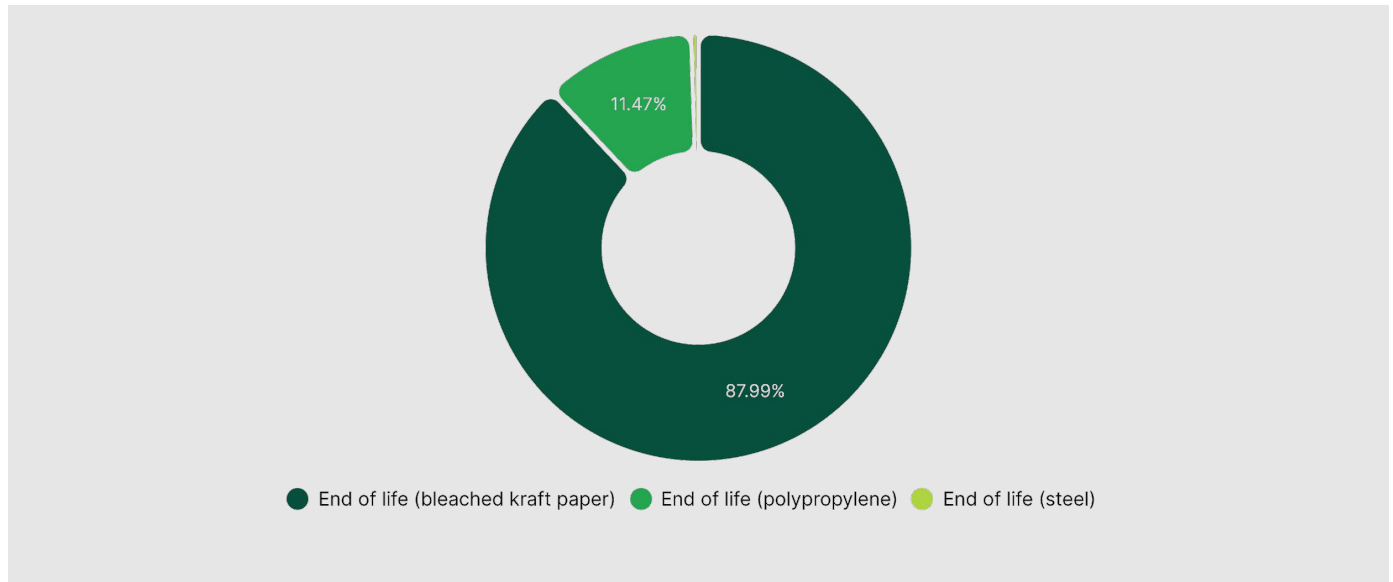

Climate Change - Transportation and Distribution

Activity	Emission Factor Num	Quantity	Impact (g CO ₂ eq)	Percentage (%)
Freight	6	0.68	38.02	100.00 %
TOTAL			38.02	100.00 %

5971292 (sold in FR)

Climate Change - End-of-Life Treatment

Activity	Emission Factor Num	Quantity	Impact (g CO ₂ eq)	Percentage (%)
End of life (bleached kraft paper)	8	0.61	352.78	87.99 %
End of life (polypropylene)	7	0.03	46	11.47 %
End of life (steel)	9	0.03	2.14	0.53 %
TOTAL			400.93	100.00 %
