## Methodology

# Environmental Impact Assessment

<b>Functional unit</b>	<p>The functional unit is a quantified performance of a product system for use as a reference unit. One of the primary purposes of a functional unit is to provide a reference to which the input and output data are normalized (in a mathematical sense).</p> <p>The functional unit of this analysis is "250 page(s) of A4 paper for writing".</p>
<b>Impact Indicator</b>	<p>The impact is measured through the "IPCC 2013 GWP 100a" method.</p>
<b>Electricity impact calculation method</b>	<p>Following guidelines from the GHG Protocol, the impact of electricity is calculated using the location-based approach. This means that the emission factors used represent the average annual carbon intensity of the power grid in the country the processes take place in.</p>
<b>Hypothesis</b>	<p>Manufacturing Processes and associated loss percentages are assumed based on materials in the product.</p> <p>The electricity is based on the average in the country of manufacturing.</p> <p>Transportation is based on the common routes between the country of manufacturing and the country of sale.</p> <p>No replacements during the lifetime, therefore there are no emissions corresponding to the usage phase.</p> <p>The End of Life is based on the average waste management process of the materials in the product.</p>

# Environmental Impact Assessment

## System Boundaries

The scope of this research includes the complete lifecycle of a piece of paper from raw material extraction to disposal options for each material, which is the cradle-to-grave perspective.

## Exclusions

The impact of secondary packaging impact and writing utensils are excluded from this assessment.

# 02

## Results

3318224 (sold in FR)

# Climate Change

Step	Impact (kg CO <sub>2</sub> eq)	Percentage (%)
Raw Material Extraction and Processing	8.75	69.61 %
End-of-Life Treatment	3	23.88 %
Manufacturing	0.53	4.19 %
Transportation and Distribution	0.29	2.32 %
<b>TOTAL</b>	<b>12.57</b>	<b>100.00 %</b>

3318224 (sold in FR)

# Climate Change - Raw Material Extraction and Processing

Activity	Emission Factor Num	Quantity	Impact (kg CO <sub>2</sub> eq)	Percentage (%)
Sourcing of raw material (coloured kraft paper)	1	7.82	8.75	100.00 %
TOTAL			8.75	100.00 %

3318224 (sold in FR)

# Climate Change - Manufacturing

Activity	Emission Factor Num	Quantity	Impact (g CO <sub>2</sub> eq)	Percentage (%)
Natural gas usage during material transformation (coloured kraft paper)	3	1.48	268.76	51.03 %
Electricity usage during material transformation (coloured kraft paper)	2	2.76	257.93	48.97 %
TOTAL			526.68	100.00 %

3318224 (sold in FR)

# Climate Change - Transportation and Distribution

Activity	Emission Factor Num	Quantity	Impact (g CO <sub>2</sub> eq)	Percentage (%)
Freight	4	5.21	291.33	100.00 %
TOTAL			291.33	100.00 %

3318224 (sold in FR)

# Climate Change - End-of-Life Treatment

Activity	Emission Factor Num	Quantity	Impact (kg CO <sub>2</sub> eq)	Percentage (%)
End of life (coloured kraft paper)	5	5.21	3	100.00 %
TOTAL			3	100.00 %
