Methodology

Environmental Impact Assessment

Functional unit	<p>The functional unit is a quantified performance of a product system for use as a reference unit. One of the primary purposes of a functional unit is to provide a reference to which the input and output data are normalized (in a mathematical sense).</p> <p>The functional unit of this analysis is "500 page(s) of A4 paper for writing".</p>
Impact Indicator	<p>The impact is measured through the "IPCC 2013 GWP 100a" method.</p>
Electricity impact calculation method	<p>Following guidelines from the GHG Protocol, the impact of electricity is calculated using the location-based approach. This means that the emission factors used represent the average annual carbon intensity of the power grid in the country the processes take place in.</p>
Hypothesis	<p>Manufacturing Processes and associated loss percentages are assumed based on materials in the product.</p> <p>The electricity is based on the average in the country of manufacturing.</p> <p>Transportation is based on the common routes between the country of manufacturing and the country of sale.</p> <p>No replacements during the lifetime, therefore there are no emissions corresponding to the usage phase.</p> <p>The End of Life is based on the average waste management process of the materials in the product.</p>

Environmental Impact Assessment

System Boundaries

The scope of this research includes the complete lifecycle of a piece of paper from raw material extraction to disposal options for each material, which is the cradle-to-grave perspective.

Exclusions

The impact of secondary packaging impact and writing utensils are excluded from this assessment.

02

Results

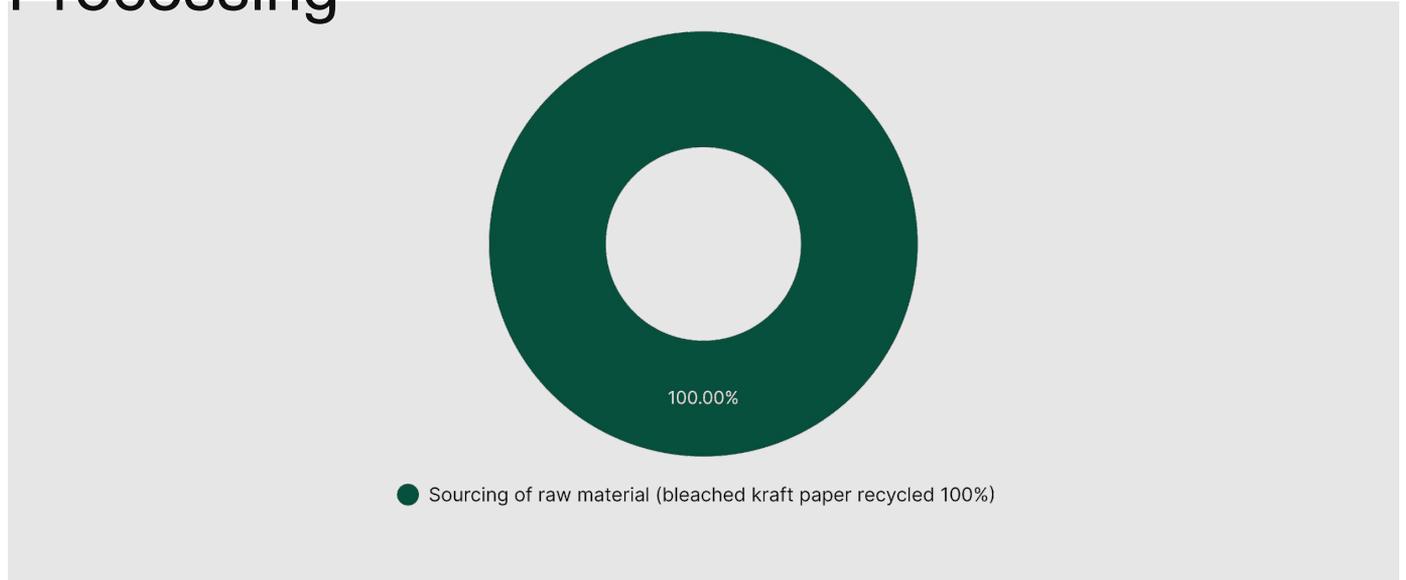

3458901 (sold in FR)
Climate Change

Step	Impact (kg CO ₂ eq)	Percentage (%)
End-of-Life Treatment	1.5	48.21 %
Manufacturing	0.74	23.83 %
Raw Material Extraction and Processing	0.59	18.82 %
Transportation and Distribution	0.28	9.14 %
TOTAL	3.11	100.00 %

3458901 (sold in FR)

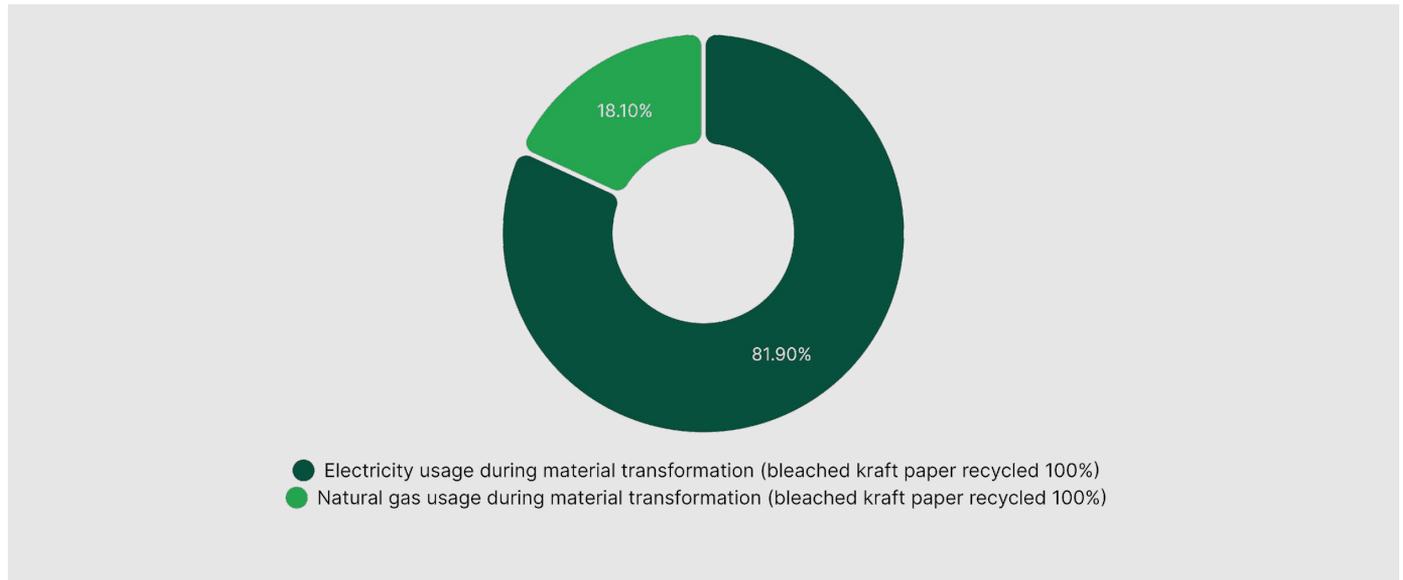

Climate Change - Raw Material Extraction and Processing

Activity	Emission Factor Num	Quantity	Impact (g CO ₂ eq)	Percentage (%)
Sourcing of raw material (bleached kraft paper recycled 100%)	1	3.9	585	100.00 %
TOTAL			585	100.00 %

3458901 (sold in FR)

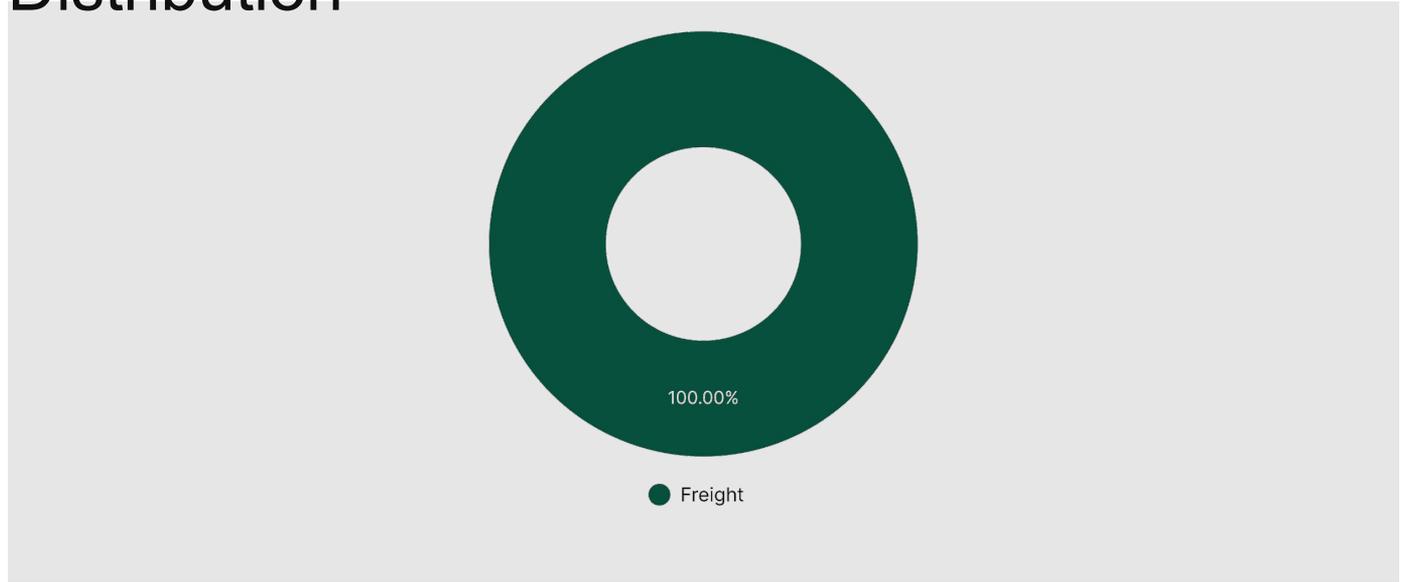

Climate Change - Manufacturing

Activity	Emission Factor Num	Quantity	Impact (g CO ₂ eq)	Percentage (%)
Electricity usage during material transformation (bleached kraft paper recycled 100%)	2	1.38	606.74	81.90 %
Natural gas usage during material transformation (bleached kraft paper recycled 100%)	3	0.74	134.12	18.10 %
TOTAL			740.86	100.00 %

3458901 (sold in FR)

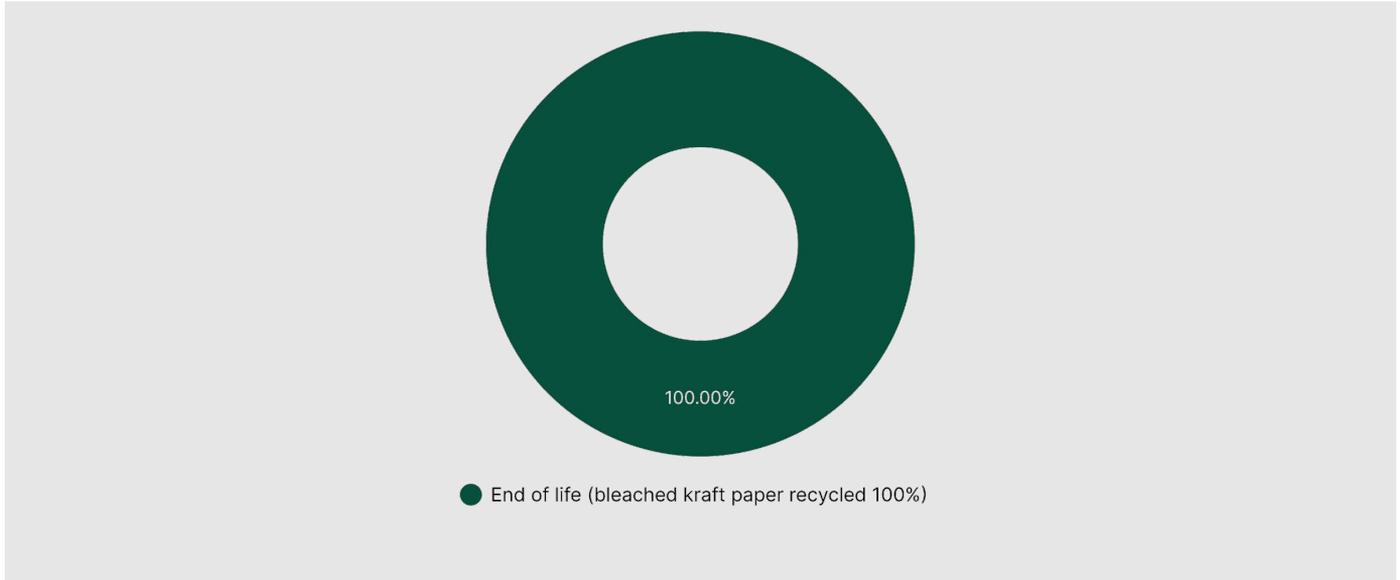

Climate Change - Transportation and Distribution

Activity	Emission Factor Num	Quantity	Impact (g CO ₂ eq)	Percentage (%)
Freight	4	2.6	284.22	100.00 %
TOTAL			284.22	100.00 %

3458901 (sold in FR)

Climate Change - End-of-Life Treatment

Activity	Emission Factor Num	Quantity	Impact (kg CO ₂ eq)	Percentage (%)
End of life (bleached kraft paper recycled 100%)	5	2.6	1.5	100.00 %
TOTAL			1.5	100.00 %
