01

Methodology

Environmental Impact Assessment

Functional unit	<p>The functional unit is a quantified performance of a product system for use as a reference unit. One of the primary purposes of a functional unit is to provide a reference to which the input and output data are normalized (in a mathematical sense).</p> <p>The functional unit of this analysis is "3 page(s) of A4 paper for writing".</p>
Impact Indicator	<p>The impact is measured through the "IPCC 2013 GWP 100a" method.</p>
Electricity impact calculation method	<p>Following guidelines from the GHG Protocol, the impact of electricity is calculated using the location-based approach. This means that the emission factors used represent the average annual carbon intensity of the power grid in the country the processes take place in.</p>
Hypothesis	<p>Manufacturing Processes and associated loss percentages are assumed based on materials in the product.</p> <p>The electricity is based on the average in the country of manufacturing.</p> <p>Transportation is based on the common routes between the country of manufacturing and the country of sale.</p> <p>No replacements during the lifetime, therefore there are no emissions corresponding to the usage phase.</p> <p>The End of Life is based on the average waste management process of the materials in the product.</p>

Environmental Impact Assessment

System Boundaries

The scope of this research includes the complete lifecycle of a piece of paper from raw material extraction to disposal options for each material, which is the cradle-to-grave perspective.

Exclusions

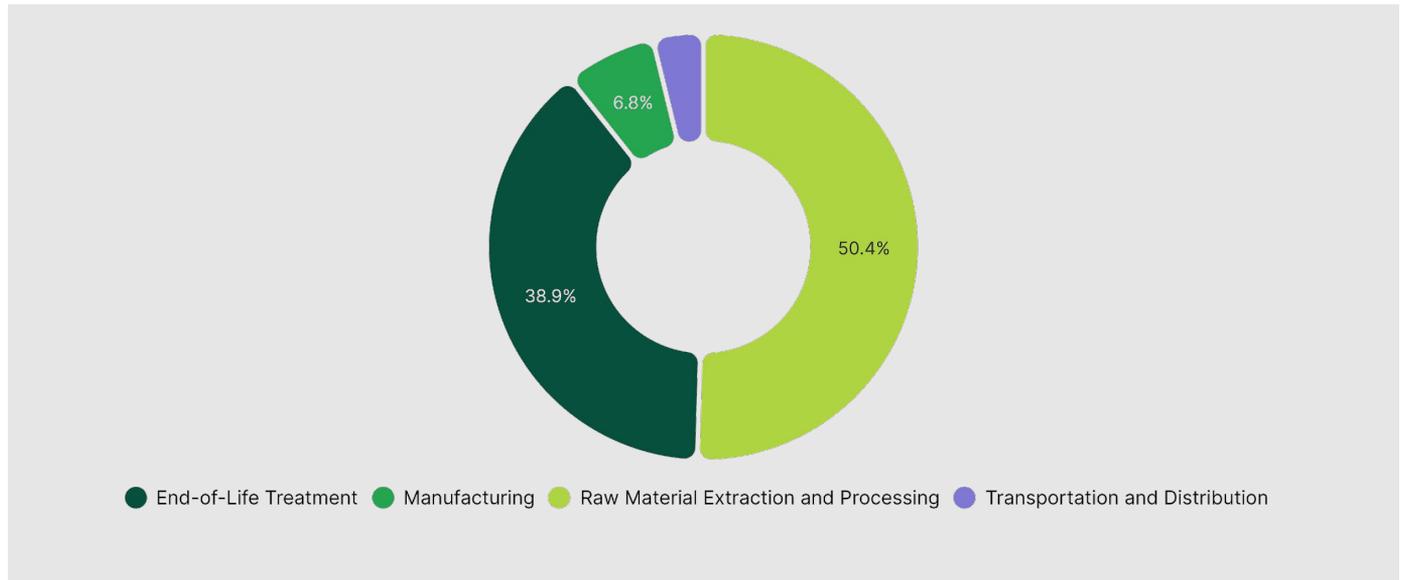

The impact of secondary packaging impact and writing utensils are excluded from this assessment.

02

Results

2201519 (sold in FR)

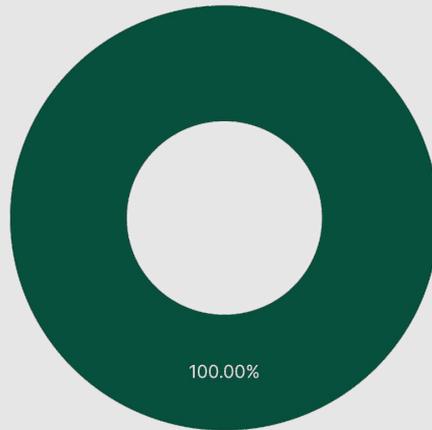

Climate Change

Step	Impact (kg CO ₂ eq)	Percentage (%)
Raw Material Extraction and Processing	15.98	50.45 %
End-of-Life Treatment	12.34	38.95 %
Manufacturing	2.16	6.83 %
Transportation and Distribution	1.2	3.78 %
TOTAL	31.67	100.00 %

2201519 (sold in FR)

Climate Change - Raw Material Extraction and Processing

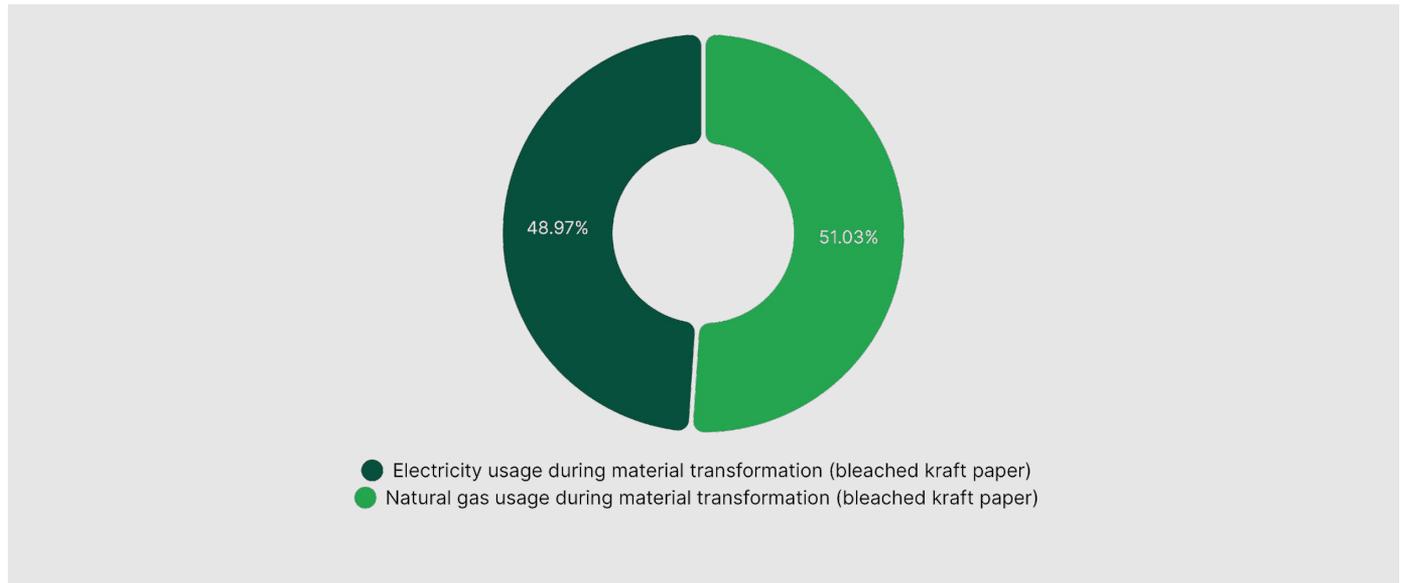

● Sourcing of raw material (bleached kraft paper)

Activity	Emission Factor Num	Quantity	Impact (kg CO ₂ eq)	Percentage (%)
Sourcing of raw material (bleached kraft paper)	1	32.1	15.98	100.00 %
TOTAL			15.98	100.00 %

2201519 (sold in FR)

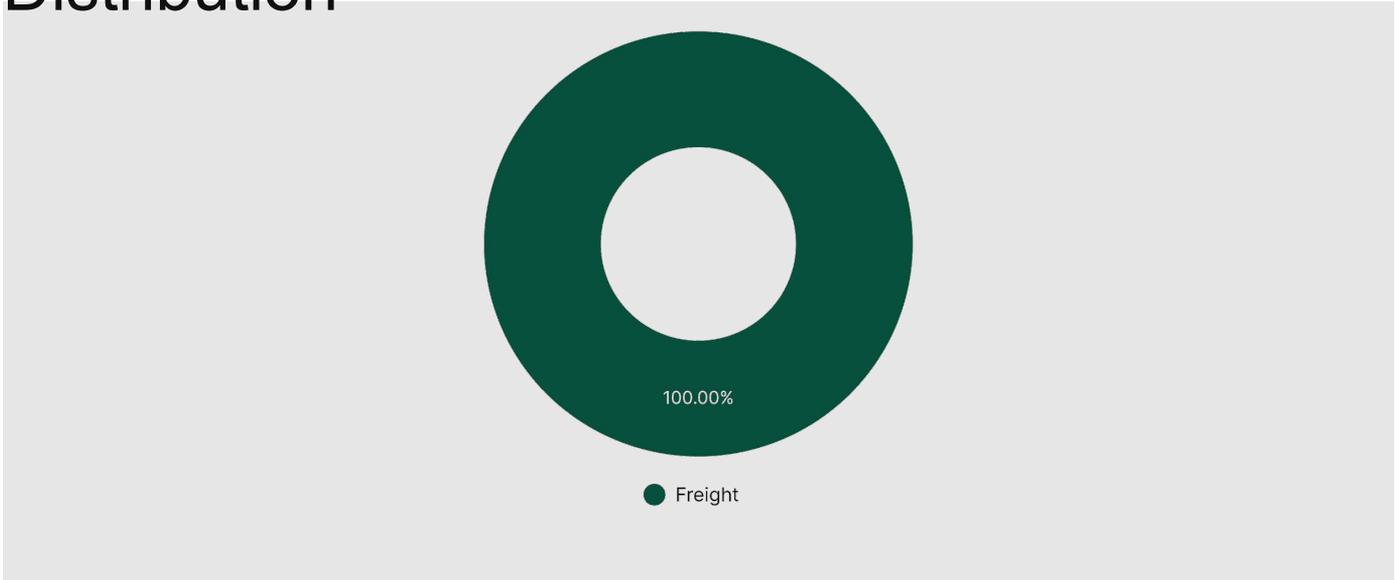

Climate Change - Manufacturing

Activity	Emission Factor Num	Quantity	Impact (kg CO ₂ eq)	Percentage (%)
Natural gas usage during material transformation (bleached kraft paper)	3	6.1	1.1	51.03 %
Electricity usage during material transformation (bleached kraft paper)	2	11.36	1.06	48.97 %
TOTAL			2.16	100.00 %

2201519 (sold in FR)

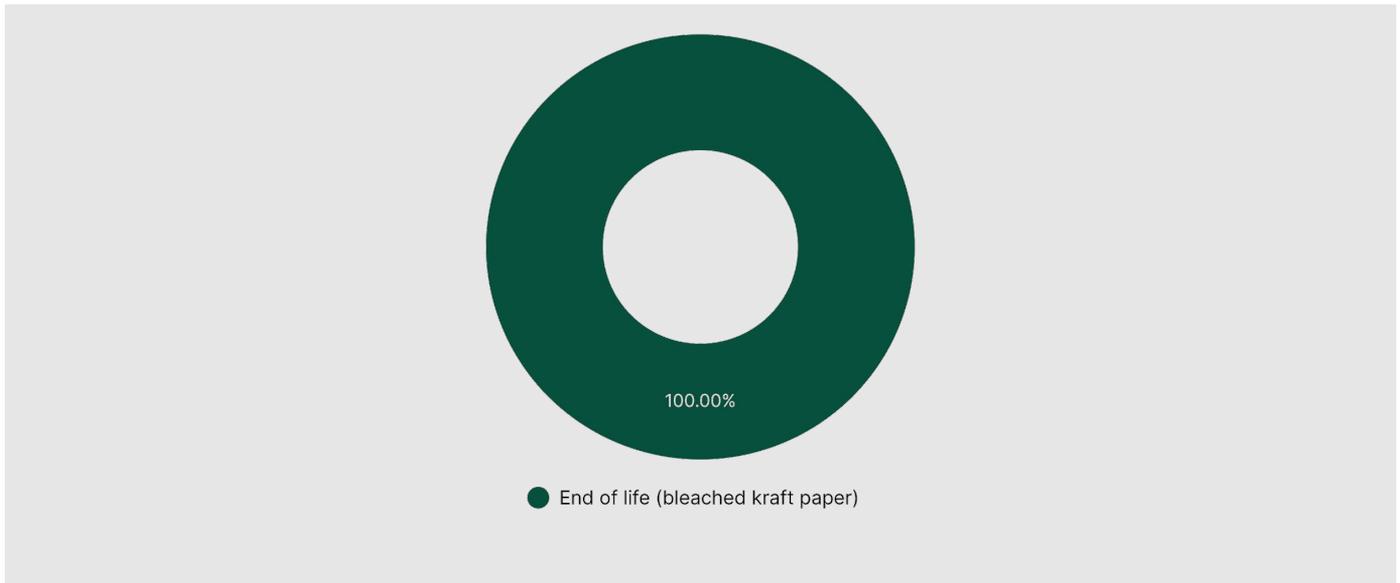

Climate Change - Transportation and Distribution

Activity	Emission Factor Num	Quantity	Impact (kg CO ₂ eq)	Percentage (%)
Freight	4	21.4	1.2	100.00 %
TOTAL			1.2	100.00 %

2201519 (sold in FR)

Climate Change - End-of-Life Treatment

Activity	Emission Factor Num	Quantity	Impact (kg CO ₂ eq)	Percentage (%)
End of life (bleached kraft paper)	5	21.4	12.34	100.00 %
TOTAL			12.34	100.00 %
