## Methodology

# Environmental Impact Assessment

<b>Functional unit</b>	<p>The functional unit is a quantified performance of a product system for use as a reference unit. One of the primary purposes of a functional unit is to provide a reference to which the input and output data are normalized (in a mathematical sense).</p> <p>The functional unit of this analysis is "500 page(s) of A4 paper for writing".</p>
<b>Impact Indicator</b>	<p>The impact is measured through the "IPCC 2013 GWP 100a" method.</p>
<b>Electricity impact calculation method</b>	<p>Following guidelines from the GHG Protocol, the impact of electricity is calculated using the location-based approach. This means that the emission factors used represent the average annual carbon intensity of the power grid in the country the processes take place in.</p>
<b>Hypothesis</b>	<p>Manufacturing Processes and associated loss percentages are assumed based on materials in the product.</p> <p>The electricity is based on the average in the country of manufacturing.</p> <p>Transportation is based on the common routes between the country of manufacturing and the country of sale.</p> <p>No replacements during the lifetime, therefore there are no emissions corresponding to the usage phase.</p> <p>The End of Life is based on the average waste management process of the materials in the product.</p>

# Environmental Impact Assessment

## System Boundaries

The scope of this research includes the complete lifecycle of a piece of paper from raw material extraction to disposal options for each material, which is the cradle-to-grave perspective.

## Exclusions

The impact of secondary packaging impact and writing utensils are excluded from this assessment.

# 02

## Results

1.946.072 (sold in FR)

# Climate Change

Step	Impact (kg CO <sub>2</sub> eq)	Percentage (%)
Raw Material Extraction and Processing	1.94	47.69 %
End-of-Life Treatment	1.49	36.73 %
Manufacturing	0.42	10.24 %
Transportation and Distribution	0.22	5.34 %
<b>TOTAL</b>	<b>4.07</b>	<b>100.00 %</b>

1.946.072 (sold in FR)

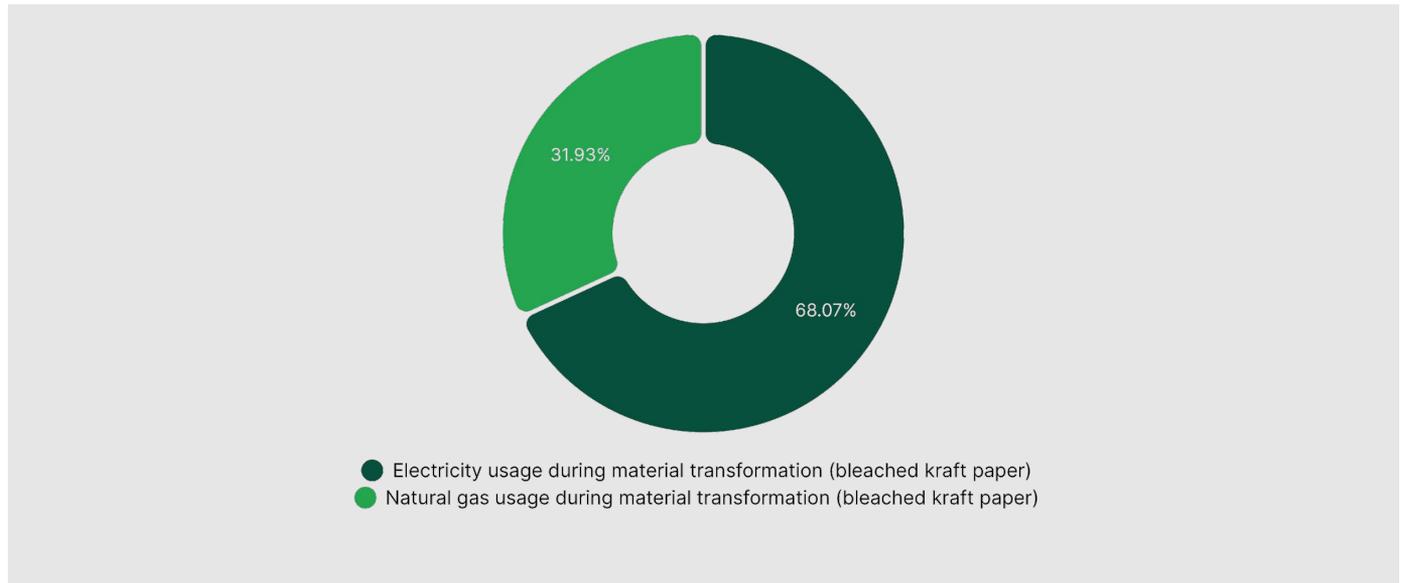

# Climate Change - Raw Material Extraction and Processing

Activity	Emission Factor Num	Quantity	Impact (kg CO <sub>2</sub> eq)	Percentage (%)
Sourcing of raw material (bleached kraft paper)	1	3.87	1.93	99.25 %
Sourcing of raw material (cardboard)	2	0.02	0.01	0.75 %
TOTAL			1.94	100.00 %

1.946.072 (sold in FR)

# Climate Change - Manufacturing

Activity	Emission Factor Num	Quantity	Impact (g CO <sub>2</sub> eq)	Percentage (%)
Electricity usage during material transformation (bleached kraft paper)	3	1.37	283.63	68.07 %
Natural gas usage during material transformation (bleached kraft paper)	4	0.73	133.01	31.93 %

1.946.072 (sold in FR)

# Climate Change - Transportation and Distribution

Activity	Emission Factor Num	Quantity	Impact (g CO <sub>2</sub> eq)	Percentage (%)
Freight	5	2.59	217.03	100.00 %
TOTAL			217.03	100.00 %

1.946.072 (sold in FR)

# Climate Change - End-of-Life Treatment

Activity	Emission Factor Num	Quantity	Impact (kg CO <sub>2</sub> eq)	Percentage (%)
End of life (bleached kraft paper)	6	2.58	1.49	99.48 %
End of life (cardboard)	6	0.01	7.76 · 10 <sup>-3</sup>	0.52 %
