Methodology

Environmental Impact Assessment

Functional unit	<p>The functional unit is a quantified performance of a product system for use as a reference unit. One of the primary purposes of a functional unit is to provide a reference to which the input and output data are normalized (in a mathematical sense).</p> <p>The functional unit of this analysis is "12 set(s) of bound pages of paper for the purpose of writing".</p>
Impact Indicator	<p>The impact is measured through the "IPCC 2013 GWP 100a" method.</p>
Electricity impact calculation method	<p>Following guidelines from the GHG Protocol, the impact of electricity is calculated using the location-based approach. This means that the emission factors used represent the average annual carbon intensity of the power grid in the country the processes take place in.</p>
Hypothesis	<p>The Product's material composition is supplemented by secondary information, if necessary, as shown in the list below.</p> <ul style="list-style-type: none"> - paper: paper 99% - binding: adhesive 1% <p>Manufacturing Processes and associated loss percentages are assumed based on materials in the product.</p> <p>The electricity is based on the average in the country of manufacturing.</p> <p>Transportation is based on the common routes between the country of manufacturing and the country of sale.</p> <p>No replacements during the lifetime, therefore there are no emissions corresponding to the usage phase.</p> <p>The End of Life is based on the average waste management process of the materials in the product.</p>

Environmental Impact Assessment

System Boundaries

The scope of this research includes the complete lifecycle of a notebook from raw material extraction to disposal options for each material, which is the cradle-to-grave perspective.

Exclusions

The impact of secondary packaging and writing utensils are excluded from this assessment.

Results

15947161 (sold in FR)

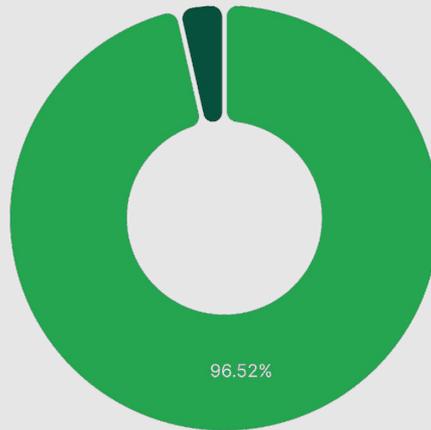

Climate Change

Step	Impact (kg CO ₂ eq)	Percentage (%)
Raw Material Extraction and Processing	0.84	57.34 %
End-of-Life Treatment	0.28	19.44 %
Manufacturing	0.22	14.83 %
Transportation and Distribution	0.12	8.39 %
TOTAL	1.46	100.00 %

15947161 (sold in FR)

Climate Change - Raw Material Extraction and Processing

● Sourcing of raw material (adhesive) ● Sourcing of raw material (coloured kraft paper)

Activity	Emission Factor Num	Quantity	Impact (g CO ₂ eq)	Percentage (%)
Sourcing of raw material (coloured kraft paper)	2	0.72	809.97	96.52 %
Sourcing of raw material (adhesive)	1	5.35 · 10 ⁻³	29.19	3.48 %

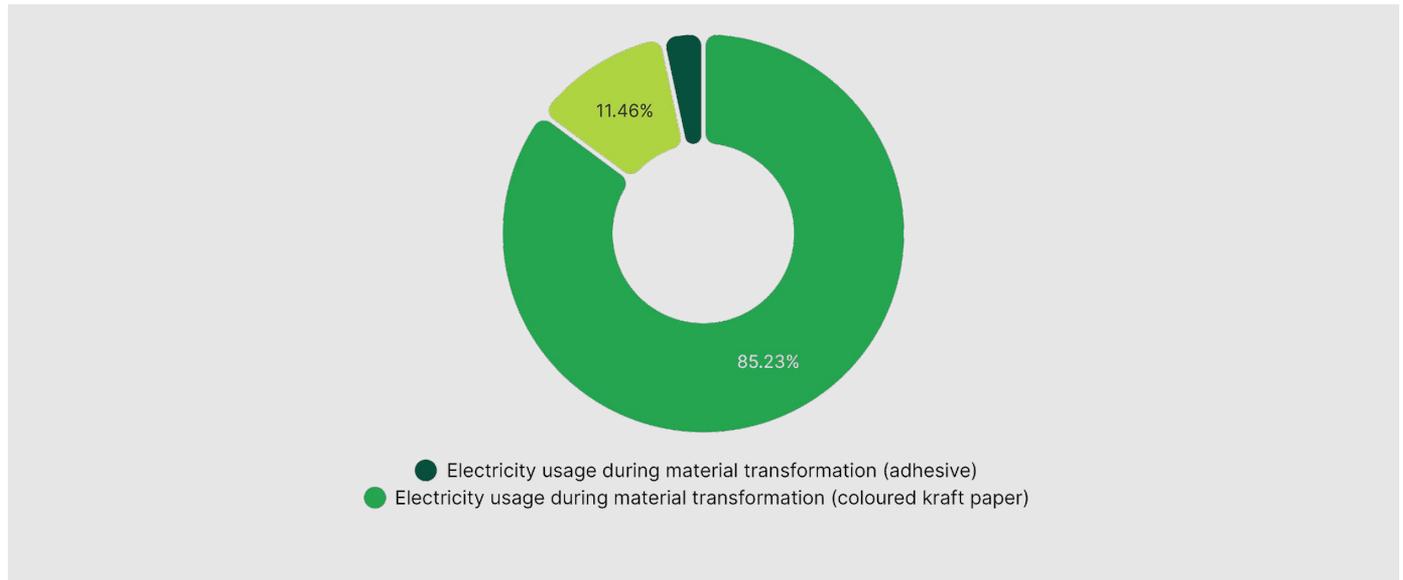

--	--	--	--	--

--	--	--	--	--

TOTAL			839.16	100.00 %
-------	--	--	--------	----------

15947161 (sold in FR)

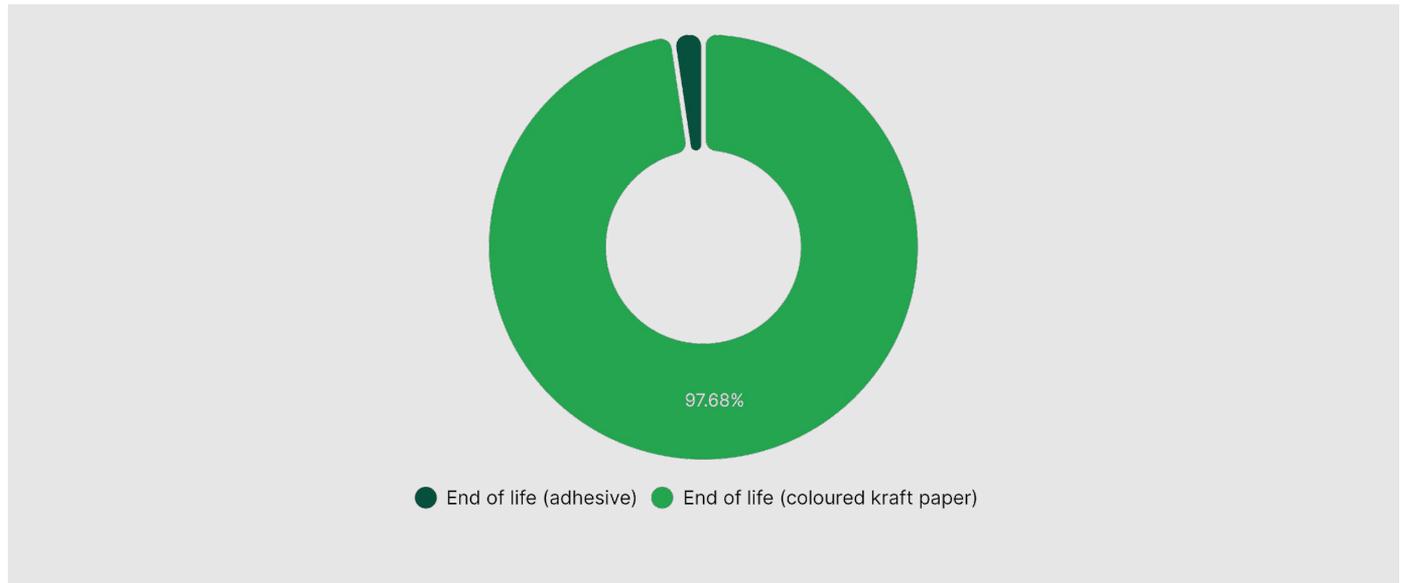

Climate Change - Manufacturing

Activity	Emission Factor Num	Quantity	Impact (g CO ₂ eq)	Percentage (%)
Electricity usage during material transformation (coloured kraft paper)	3	0.26	184.98	85.23 %
Natural gas usage during material transformation (coloured kraft paper)	4	0.14	24.87	11.46 %
Electricity usage during material transformation (adhesive)	3	9.94 · 10 ⁻³	7.19	3.31 %
TOTAL			217.04	100.00 %

15947161 (sold in FR)

Climate Change - End-of-Life Treatment

Activity	Emission Factor Num	Quantity	Impact (g CO ₂ eq)	Percentage (%)
End of life (coloured kraft paper)	6	0.48	277.92	97.68 %
End of life (adhesive)	7	4.86 · 10 ⁻³	6.59	2.32 %
TOTAL			284.51	100.00 %
