## Methodology

# Environmental Impact Assessment

<b>Functional unit</b>	<p>The functional unit is a quantified performance of a product system for use as a reference unit. One of the primary purposes of a functional unit is to provide a reference to which the input and output data are normalized (in a mathematical sense).</p> <p>The functional unit of this analysis is "12 set(s) of bound pages of paper for the purpose of writing".</p>
<b>Impact Indicator</b>	<p>The impact is measured through the "IPCC 2013 GWP 100a" method.</p>
<b>Electricity impact calculation method</b>	<p>Following guidelines from the GHG Protocol, the impact of electricity is calculated using the location-based approach. This means that the emission factors used represent the average annual carbon intensity of the power grid in the country the processes take place in.</p>
<b>Hypothesis</b>	<p>The Product's material composition is supplemented by secondary information, if necessary, as shown in the list below.</p> <ul style="list-style-type: none"> <li>- paper: paper 99%</li> <li>- binding: adhesive 1%</li> </ul> <p>Manufacturing Processes and associated loss percentages are assumed based on materials in the product.</p> <p>The electricity is based on the average in the country of manufacturing.</p> <p>Transportation is based on the common routes between the country of manufacturing and the country of sale.</p> <p>No replacements during the lifetime, therefore there are no emissions corresponding to the usage phase.</p> <p>The End of Life is based on the average waste management process of the materials in the product.</p>

# Environmental Impact Assessment

## System Boundaries

The scope of this research includes the complete lifecycle of a notebook from raw material extraction to disposal options for each material, which is the cradle-to-grave perspective.

## Exclusions

The impact of secondary packaging and writing utensils are excluded from this assessment.

# 02

## Results

103687 (sold in FR)

# Climate Change

Step	Impact (g CO <sub>2</sub> eq)	Percentage (%)
Raw Material Extraction and Processing	293.5	57.34 %
End-of-Life Treatment	99.51	19.44 %
Manufacturing	75.91	14.83 %
Transportation and Distribution	42.97	8.39 %
<b>TOTAL</b>	<b>511.89</b>	<b>100.00 %</b>

# Climate Change - Raw Material Extraction and Processing

● Sourcing of raw material (adhesive) ● Sourcing of raw material (coloured kraft paper)

Activity	Emission Factor Num	Quantity	Impact (g CO <sub>2</sub> eq)	Percentage (%)
Sourcing of raw material (coloured kraft paper)	2	0.25	283.29	96.52 %
Sourcing of raw material (adhesive)	1	1.87 · 10 <sup>-3</sup>	10.21	3.48 %

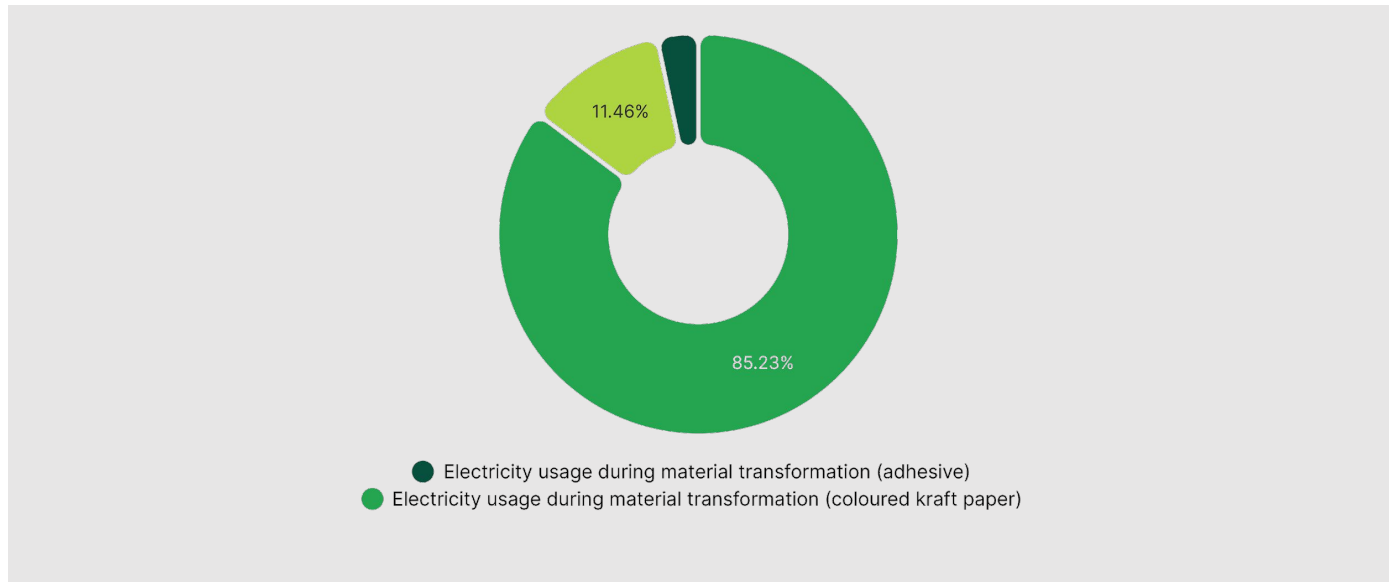

--	--	--	--	--

--	--	--	--	--

TOTAL			293.5	100.00 %
-------	--	--	-------	----------

103687 (sold in FR)

# Climate Change - Manufacturing

Activity	Emission Factor Num	Quantity	Impact (g CO <sub>2</sub> eq)	Percentage (%)
Electricity usage during material transformation (coloured kraft paper)	3	0.09	64.7	85.23 %
Natural gas usage during material transformation (coloured kraft paper)	4	0.05	8.7	11.46 %
Electricity usage during material transformation (adhesive)	3	3.47 · 10 <sup>-3</sup>	2.51	3.31 %
TOTAL			75.91	100.00 %

103687 (sold in FR)

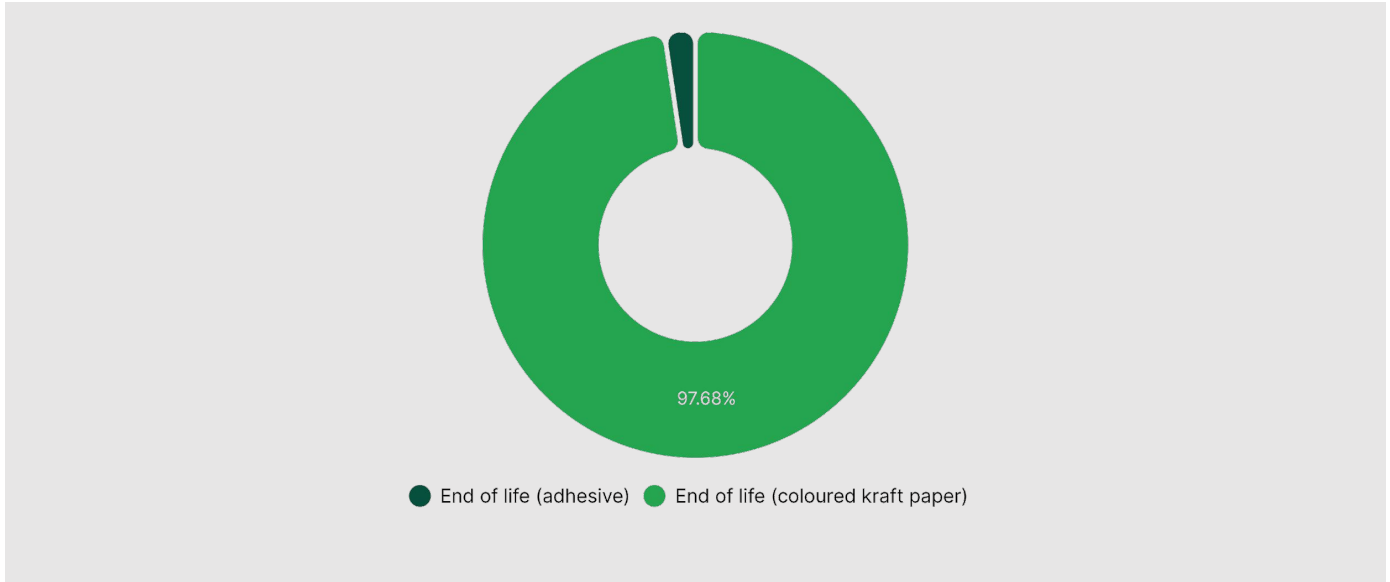

# Climate Change - Transportation and Distribution

Activity	Emission Factor Num	Quantity	Impact (g CO <sub>2</sub> eq)	Percentage (%)
Freight	5	0.17	42.97	100.00 %
TOTAL			42.97	100.00 %

103687 (sold in FR)

# Climate Change - End-of-Life Treatment

Activity	Emission Factor Num	Quantity	Impact (g CO <sub>2</sub> eq)	Percentage (%)
End of life (coloured kraft paper)	6	0.17	97.2	97.68 %
End of life (adhesive)	7	1.7 · 10 <sup>-3</sup>	2.3	2.32 %
TOTAL			99.51	100.00 %
