ANSELL SINGLE USE GLOVES – CAT. III

A. Use

This Instruction for Use note is to be used in combination with the specific information that is mentioned on each packaging enclosure. These gloves are designed to protect the hands mainly against chemical splashes and comply with the applicable harmonised EN or EN ISO Standards as shown by the pictograms being mentioned on the packaging. The gloves therefore will provide protection against the specific risks as shown by the pictograms which are defined by these harmonised standards. The gloves are in conformity with the European Directive 89/686/EEC (until 21 April 2018) and the European Regulation 2016/425 (from 21 April 2018). Gloves which are accompanied with the pictogram which designates contact with foodstuffs, are also in conformity with the European Regulations 1935/2004 and 2023/2006 as well as with all applicable National Regulations for Food-contact materials. Please ensure the gloves are used only for the designated purposes, as explained above.

Explanation of symbols & pictograms:

 A B C D E EN 388:2016	Protection from mechanical risks A: Abrasion resistance (performance levels 0 to 4) B: Blade cut resistance (performance levels 0 to 5) C: Tear resistance (performance levels 0 to 4) D: Puncture resistance (performance levels 0 to 4) E: TDM ISO EN 13997 cut resistance (performance levels A to F) If the levels under the EN 388 pictogram are marked with a prefix EU or BR or PRC ; this refers to the levels obtained respectively by	the European Notified Body according EN 388:2016, by the Brazilian Certification Institute according EN 388:2003 or by the People Republic of China Certification Institute according GB 24541. Warning: the performance levels claimed for the gloves are based on tests performed on the palm area of the gloves. For gloves with two or more layers, these overall performance levels may not necessarily reflect the performance of the glove's outermost layer.			
 EN 421:2010	Protection against radio-active contamination.	 EN ISO 374-5:2016	Protection against bacteria and fungi, not tested against virus.	 EN ISO 374-5:2016	Protection against bacteria, fungi and virus.
 A B C D E F G H I J K L M N O P S T EN ISO 374-1:2016 / Type A, B or C	Type A = chemical breakthrough time > 30 minutes against at least 6 chemicals as per list below. Type B = chemical breakthrough time > 30 minutes against at least 3 chemicals as per list below. Type C = chemical breakthrough time > 10 minutes against at least one test chemical as per list below (no code underneath the pictogram). A = methanol B = acetone C = acetonitrile D = dichloromethane E = carbon disulfide F = toluene G = diethylamine H = tetrahydrofuran I = ethyl acetate J = n-heptane K = sodium hydroxide, 40% L = sulphuric acid, 96 % M = nitric acid, 65% N = acetic acid, 99% O = ammonia, 25% P = hydrogen peroxide, 30% S = hydrofluoric acid, 40% T = formaldehyde, 37%				
 CE XXXX	Product is compliant and certified to the requirements of the European Regulations on Personal Protective Equipment. XXXX refers to the identification number of the Notified Body that is in charge of the Category III conformity assessment.		 EAC TP TC 019/2011	Product is compliant and certified to the requirements of the Russian Custom Regulation TP TC 019/2011.	
 CA XX.XXX	Certificate of Approval, as certified to the requirements of the Brazilian Regulation (whereas xx.xxxx refers to the certificate number).		 KCS	Product is compliant and certified to the requirements of the Korean Occupational Health & Safety Act legislation for PPE.	
 EN 420:2003 + A1:2009	Please read the Instructions for Use, prior to using the gloves, or contact Ansell for more information.		Suitable for contact with foodstuffs.	 EN 16350:2014	Gloves meeting the requirement (vertical resistance < 10° ohm); for use in areas where flammable or explosive areas exist.

EU-Type examination certificate (Module B) by Centexbel Belgium (I.D. 0493), Technologiepark 7, B-9052 Zwijnaarde. Gloves marked with CE 0086 = EU Conformity to type based on quality assurance of the production process (Module D) by BSI United Kingdom (I.D. 0086), Kitemark Court Davy Avenue Knowhill, Milton Keynes MK5 8PP. Gloves marked with CE 0493 = supervised product checks (Module C2) by Centexbel Belgium (I.D. 0493), Technologiepark 7, B-9052 Zwijnaarde.

Warning!

Chemical resistance data provided, has been assessed under laboratory conditions from samples taken from the palm only and relates only to the chemical tested. It can be different if it is used in a mixture. For gloves equal or longer than 400 mm, the chemical resistance data is based from samples taken, 80 mm from the end of the cuff. The chemical resistance data may not reflect the actual duration of protection in the workplace and the differentiation between mixtures and pure chemicals. It is recommended to check that the gloves are suitable for the intended use because the conditions at the workplace may differ from the type test depending on temperature, abrasion and degradation. When used, protective gloves may provide less resistance to the dangerous chemical due to changes in physical properties. Movements, snagging, rubbing, degradation caused by the chemical contact etc. may reduce the actual use time significantly. For corrosive chemicals, degradation can be the most important factor to consider in selection of chemical resistant gloves. Chemical permeation data, as tested per EN 16523-1:2015 test method, and degradation data, tested per EN 374-4:2013 test method, are available upon request. For more detailed information on the product's performance and to obtain a copy of the Conformity Declaration, please consult Ansell. To obtain the EU-Conformity Declaration, please use the link as shown hereunder: www.ansell.com/regulatory

B. Precautions for use

- Before usage, inspect the gloves for any defects or imperfections such as holes, pinholes and tears. If the gloves are ripped or punctured during use, dispose of them immediately. If in doubt, do not use the gloves, get a new pair.
- Do not reverse the gloves.
- It is essential to keep all chemicals from contact with the skin, even if they are thought to be harmless.
- Avoid wearing gloves which are dirty on the inside - they may irritate the skin, causing dermatitis or worse.
- Contaminated gloves should be cleaned or washed before removal.
- Ensure the chemicals cannot enter via the cuff.
- Gloves which have a tear level of 1 or above (as per EN 388) should not be used for protection against serrated blades or when there is a risk of entanglement with moving machine parts.
- The gloves should not come in contact with a naked flame.
- Gloves shall not be used for protection against ionising radiation nor for use in containment enclosures.
- Some glove type versions may have a length which falls below the minimum glove length as defined in EN420:2003 – as shown in the table below. These gloves are 'Fit for Special Purpose gloves' because they are to be used to protect the hand ONLY from chemical splashes. Do not use these gloves when protection in the cuff area is needed. Please consult Ansell or ask for the technical datasheet should you want to know the glove length of the glove(s).

Size	6	7	8	9	10	11
Minimum glove length (mm)	220	230	240	250	260	270

- Not all gloves that are suitable for contact with foodstuffs may be used against all foodstuffs. Some gloves may show excessive migration towards certain types of foodstuffs. To know which restrictions apply and for which specific foodstuffs the gloves can be used, please obtain advice from Ansell or consult the Ansell Food Conformity declaration.
- If gloves are marked, the printed surfaces shall not come in contact with food.
- If gloves are being used in explosive environments, please ensure they meet the EN 16350 requirements. Persons wearing these gloves should be properly grounded, e.g. by wearing adequate footwear & clothing.
Warning: the gloves shall not be unpacked, opened, adjusted or removed whilst in flammable or explosive atmospheres. The electrostatic properties of the gloves might be adversely affected by ageing, wear, contamination and damage and might not be sufficient for oxygen enriched flammable atmospheres where additional assessments are necessary.

C. Ingredients / Hazardous ingredients

Some gloves might contain ingredients which are known to be a possible cause of allergies in sensitised persons, who may develop irritant and/or allergic contact reactions. If allergic reactions should occur, obtain medical advice immediately. For more information, please contact Ansell.

D. Care instructions

Storage: Keep away from direct sunlight; store in a cool dry place. Keep away from ozone sources. If gloves are properly stored, as indicated above, they won't lose their performances and won't change the glove characteristics significantly. If gloves could be affected by ageing or storage, the expiry date is mentioned on the packaging materials.

Cleaning: These are single-use gloves and are not designed to be laundered nor to be reused.

E. Disposal

Used gloves may be contaminated with infectious or other hazardous materials.

Dispose of according to Local Authority Regulations. Landfill or incinerate under controlled conditions.
