Methodology

Environmental Impact Assessment

Functional unit	<p>The functional unit is a quantified performance of a product system for use as a reference unit. One of the primary purposes of a functional unit is to provide a reference to which the input and output data are normalized (in a mathematical sense).</p> <p>The functional unit of this analysis is "16 set(s) of adhesive notes for the purpose of writing".</p>
Impact Indicator	<p>The impact is measured through the "IPCC 2013 GWP 100a" method.</p>
Electricity impact calculation method	<p>Following guidelines from the GHG Protocol, the impact of electricity is calculated using the location-based approach. This means that the emission factors used represent the average annual carbon intensity of the power grid in the country the processes take place in.</p>
Hypothesis	<p>The Product's material composition is supplemented by secondary information, if necessary, as shown in the list below.</p> <ul style="list-style-type: none"> - paper: paper 99% - binding: adhesive 1% <p>Manufacturing Processes and associated loss percentages are assumed based on materials in the product.</p> <p>The electricity is based on the average in the country of manufacturing.</p> <p>Transportation is based on the common routes between the country of manufacturing and the country of sale.</p> <p>No replacements during the lifetime, therefore there are no emissions corresponding to the usage phase.</p> <p>The End of Life is based on the average waste management process of the materials in the product.</p>

Environmental Impact Assessment

System Boundaries

The scope of this research includes the complete lifecycle of a stack of sticky notes from raw material extraction to disposal options for each material, which is the cradle-to-grave perspective.

Exclusions

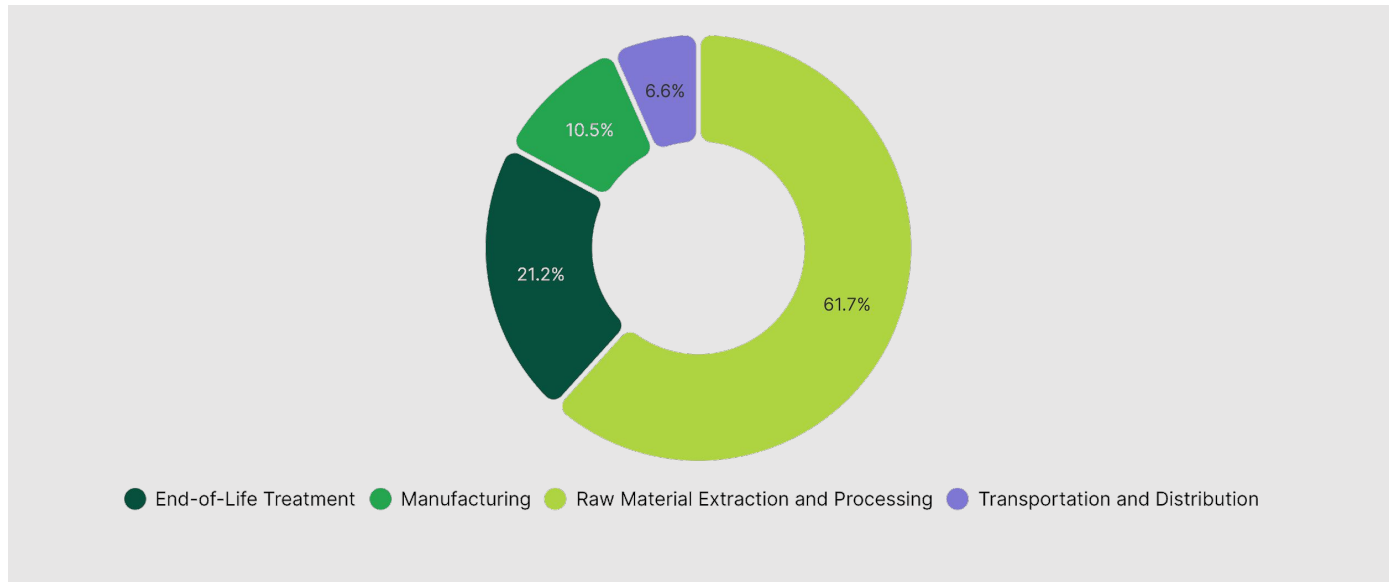

The impact of secondary packaging and writing utensils are excluded from this assessment.

Results

4.552.617 (sold in PL)

Climate Change

Step	Impact (kg CO ₂ eq)	Percentage (%)
Raw Material Extraction and Processing	1.28	61.69 %
End-of-Life Treatment	0.44	21.17 %
Manufacturing	0.22	10.50 %
Transportation and Distribution	0.14	6.64 %
TOTAL	2.07	100.00 %

4.552.617 (sold in PL)

Climate Change - Raw Material Extraction and Processing

Activity	Emission Factor Num	Quantity	Impact (kg CO ₂ eq)	Percentage (%)
Sourcing of raw material (coloured kraft paper)	1	1.14	1.28	100.00 %
TOTAL			1.28	100.00 %

4.552.617 (sold in PL)

Climate Change - Manufacturing

- Electricity usage during material transformation (coloured kraft paper)
- Natural gas usage during material transformation (coloured kraft paper)

Activity	Emission Factor Num	Quantity	Impact (g CO ₂ eq)	Percentage (%)
Electricity usage during material transformation (coloured kraft paper)	3	0.4	178.2	81.97 %
Natural gas usage during material transformation (coloured kraft paper)	2	0.22	39.2	18.03 %

--	--	--	--	--

--	--	--	--	--

TOTAL			217.41	100.00 %
-------	--	--	--------	----------

4.552.617 (sold in PL)

Climate Change - Transportation and Distribution

Activity	Emission Factor Num	Quantity	Impact (g CO ₂ eq)	Percentage (%)
Freight	4	0.76	137.42	100.00 %
TOTAL			137.42	100.00 %

4.552.617 (sold in PL)

Climate Change - End-of-Life Treatment

Activity	Emission Factor Num	Quantity	Impact (g CO ₂ eq)	Percentage (%)
End of life (coloured kraft paper)	5	0.76	438.1	100.00 %
TOTAL			438.1	100.00 %
